

# Renewable Fuels of Vermont

West Windsor, VT

With working lands funds, Renewable Fuels of Vermont (RFVermont) will be upgrading their wood pellet mill with a finish dryer in order to increase potential output of the mill and gain production efficiency. They are a newly formed company lead by two seasoned leaders in Vermont's wood pellet industry whose primary motivation was in saving the mill from closure. With the potential help of working lands grant funding, RFVermont seeks to increase their production capability by an estimated 17%. A necessary increase to make their operations profitable and still remain "Vermont Scale."

Total Working Lands Grant—\$50,000 for a wood pellet mill finish dryer
