

VERMONT WORKING LANDS ENTERPRISE INITIATIVE

Scott Magnan's Custom Service

St. Albans, VT

Scott Magnan's Custom Service is a small locally owned company founded in 1997 that provides crop production services such as forage harvest, manure application, and planting to farmers in northwest Vermont. Over the last 6 years our business has been focused on minimizing our impact as well as our customer's impact on the environment. Starting with education we worked to understand how best to implement new practices to our region such as no-till corn production, manure injection, and cover cropping that improve the quality of soil, crops, and the environment.

Funds will be used for equipment expansion for agriculture and soil health by planting no-till crops by upgrading a John Deere planter, and purchasing a Vertical tillage tank mounted manure injector that would be new to the region.

Total Working Lands Grant: \$25,000

Total Matching Funds: \$32,000
