

VERMONT WORKING LANDS ENTERPRISE INITIATIVE

Timberhomes, LLC

Vershire, VT

TimberHomes LLC is a construction partnership based in Vershire, Vermont. We offer a wide range of services from design and planning to general contracting and construction.

Specializing in timber frame construction, we particularly like to use naturally curved wood and forked tree sections in our work. Our projects range from trellises and pergolas to sizable homes built from the ground up.

They will research current trends and products in the green building sector of the residential construction industry, develop a design and cost for a Natural SIP prototype that would incorporate available natural resources from VT; they will then build a prototype of the SIP and test for performance. Finally they will create a strategic plan for developing infrastructure necessary to produce this product.

Total Working Lands Grant—\$12,000.00

Total Match provided by Timberhomes, LLC—\$3,000.00

VERMONT WORKING LANDS ENTERPRISE INITIATIVE

GRANT RECIPIENT UPDATE - MARCH '14

Timberhomes LLC has successfully produced its first VT-made SIP. The building panel is comprised largely of VT grown rough-sawn lumber for framing and sheathing, as well as regionally sourced T&G wood paneling. The SIP can be insulated with rock wool or cellulose insulation; as part of the WLEB Grant work Timberhomes LLC will determine if a VT grown agricultural product can be used for insulating the panel. This will enable Timberhomes LLC to offer a truly unique building product - a house enclosure panel that is almost exclusively "grown" in Vermont.
