

VERMONT WORKING LANDS ENTERPRISE INITIATIVE

Vermont Wildwoods

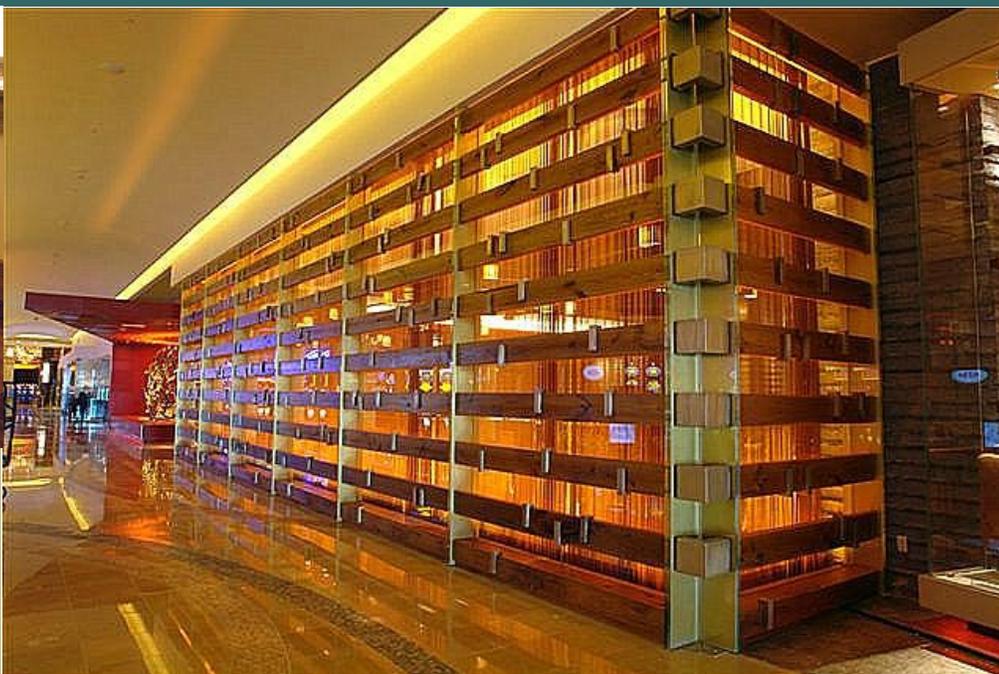

Marshfield, VT

Vermont WildWoods is a specialty wide plank flooring and millwork company dealing exclusively with the salvage and manufacturing of disease killed butternut trees for the architectural design industry.

They meet with landowners, foresters, and loggers to ensure that sound forest management practices are adhered to. They inspect woodlots and insist that only diseased trees are harvested. They custom saw their logs into lumber, set the moisture content at the kiln, and control the thickness of the veneer as it comes off the slicer.

They keep a large inventory of logs at our facility, ready to be processed for your project. Whether it is veneer, lumber, flooring, or large timbers, they can custom process the material you need to meet your specific design goals.

Vermont Wildwoods will use the funds for new inventory for the first commercial scale wood spalting chamber. Spalting is the process of introducing specific fungi to create striking visual effects in the wood fiber. Spalting of wood is similar to cave aging cheese, or dry curing of salami,

Total Working Lands Grant: \$20,000

Total Matching Funds: \$5,000
